

# The best technology from OE to the Aftermarket.

## HEAVY DUTY POLY-V BELT DRIVE COMPONENTS

- **Non-automatic tensioning wheel:** the tensioning force is manually set at one time according to the requirements of the wheel system and maintain long-term stability.
- **Automatic tension wheel:** Under any working condition, the tension of the wheel train can be adjusted dynamically according to the operating conditions of the engine.
- **Idler wheel:** plays a guiding role and can effectively reduce noise and deviation of wheel alignment.
